

Why Choose the Jet Towel?

In 1993, Mitsubishi developed the solution to slow hand dryers by introducing the Jet Towel, reducing the cost of hand drying by 98% and its impact on our environment by 85%. The newest model, the eighth Jet Towel to date, incorporates 20 years of innovation to bring the most comfortable hand drying experience available.

It features:

- **3600-Hour Motor Life** – Equal to 7 years at 400 uses per day.
- **Drain Tank** – A drain tank safely contains water for easy disposal at the end of the day instead of spilling water onto walls and the floors.
- **61 dB** – Every head-to-head comparison rates the Jet Towel as the quietest dryer.
- **Naturally ADA Compliant** – No special mounting height for wheelchair users and the visually impaired.
- **Most Energy Efficient** – The Jet Towel uses only 1250 watts with the heater on, 10% less than most comparable dryers. With the heater turned off, the Jet Towel requires only 730 watts.
- **Quick Dry Time** – Achieves completely dry hands in 10 seconds.
- **Heated Air Option** – The Jet Towel provides 95 degree air purely for user comfort. If turned off – the setting similar to most other dryers – the electrical use drops to 730 watts, 1/3 less than comparable dryers.
- **12 Month ROI** – Most restrooms see a ROI of 12 months, with higher use restrooms shortening the return.

Electrical and Installation Notes

- 120 V / 60 Hz
- 11.4 A
- Dedicated single-pole GFCI breaker required
- Recommended mounting height is 37"
- Wall mounted on a supplied bracket
